DETAILED ACTION

Response to Arguments

The Applicants' arguments regarding the efficacy of the restriction requirement are not persuasive for reasons cited in the election/restriction action.

Drawings

Figures noted as prior art should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 notes "a first hollow component" which is confusing language since as best can be determined this is the same as "the opening". At any rate, no real component is evident, simply a hollow area. Claims 4 and 5 cite "the sealant" which language has no proper antecedent basis in claim 1. The other claims are rejected solely due to their dependence on claim 1.

Allowable Subject Matter

Claims 1-9 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to show or fairly suggest a SAW element in a top chamber and residing on a second substrate which sits on a bottom chamber side walls and which bottom chamber contains an electronic component sitting on a first substrate which has a shaped defining the bottom chamber; which electronic component is used to drive the SAW element with associated and connected electrodes, wherein the whole device thus described is covered by a cap which is hermetically joined to the first substrate.
